WHAT IS CLAIMED IS:

5

1. A system for inductively transferring electrical power to a computer peripheral device during normal operation of the peripheral device, comprising:

a base unit including:

a source loop to generate a magnetic field,

a loop power circuit to provide a signal to drive the source loop, and

a power source coupler structured to provide power to the loop

power circuit when the power source coupler is coupled to a power source;

and

the peripheral device having a victim loop and structured to be inductively coupled to the base unit while the peripheral device is in operable condition.

2. The power transfer system of claim \(\frac{1}{2} \) wherein the peripheral device is a computer mouse.

3. The power transfer system of claim 2 wherein the base unit is incorporated in a mousepad.

4. The power transfer system of claim 1 wherein the base unit comprises a first area and a second area, and wherein a level of magnetic permeability is higher in the first area than in the second area.

5. The power transfer system of claim 1 wherein the peripheral device comprises a first area and a second area, and wherein a level of magnetic permeability is higher in the first area than in the second area.

25

- 6. The power transfer system of claim 5 wherein the peripheral device further comprises a data transmitter having an antenna formed in the first area.
- 7. The power transfer system of claim 1 wherein the source loop is a coil of wire having a solenoid shape.
- 8. The power transfer system of claim 1 wherein the base further comprises one or more additional source loops.
- 9. The power transfer system of claim wherein the peripheral device further includes:

a rechargeable battery, and

a recharging circuit coupled between the victim loop and the rechargeable battery.

- 10. The power transfer system of claim 1, further comprising:
 a data transmitter coupled to the peripheral device, and
 a data receiver coupled to the base unit.
- 20 11. The power transfer system of claim 10, wherein the data transmitter sends a signal selected from the group consisting of radio frequency, infra-red, and ultrasonic.
- 12. The power transfer system of claim 10 wherein the data transmitter is structured to send wireless signals and the data receiver is structured to receive wireless signals.

P12510 17 5038-138

- 13. The power transfer system of claim 1 wherein the peripheral device is additionally in operative condition when not inductively coupled to the base device.
- 14. A system for supplying power to a computer mouse, comprising:
 a base unit having a power signal input connectable to a power source,
 and having a magnetic source loop coupled to the power signal input; and
 the computer mouse having a magnetic victim loop coupled to a load
 circuit within the mouse.
- 15. The system of claim 14, further comprising a rechargeable battery in the computer mouse, and wherein the load circuit is coupled to the rechargeable battery.
- 16. The system of claim 14 wherein the load circuit is structured to drive a mouse positional circuit within the computer mouse.
- 17. The system of claim 14 wherein the load circuit is a wireless data transmitter.
- 18. The system of claim 14 wherein the power signal input is coupled to a serial bus, and, when the serial bus is powered, the base unit is structured to supply power from the serial bus to a source loop signal generator, which is coupled to the magnetic source loop.
- 19. The system of claim 18 wherein the source loop signal generator comprises an oscillator circuit.

25

20

5038-138

- 20. The system of claim 19 wherein the oscillator circuit can generate a signal having a frequency at or above 60 cycles per second.
- The system of claim 15, further comprising a docking cradle shaped to receive the computer mouse, the docking cradle having a battery recharging circuit.
 - 22. The system of claim 14, wherein, during a normal operating position of the computer mouse, the magnetic source loop and the magnetic victim loop are horizontally overlapped.
 - 23. A method of powering a computer peripheral device having a victim loop coupled to circuitry of the peripheral device, the method comprising:

accepting a power signal at a power input; and

applying a source loop driving signal to a source loop while the source loop is proximate to the computer peripheral device.

- 24. The method of claim 23 wherein the power signal is the source loop driving signal.
- 25. The method of claim 23, further comprising rectifying the power signal to a source loop driving signal.
- 25 26. The method of claim 23 wherein the power signal is coupled to a bus on a personal computer.

P12510 19 5038-138

27. A method of recharging a rechargeable battery in a computer mouse that has a magnetic victim loop coupled to a battery recharging circuit, the method comprising:

creating a magnetic field by driving a magnetic source loop with a magnetic source loop driving signal; and

causing the magnetic field to interact with the magnetic victim loop in the computer mouse.

- 28. The method of claim 27, further comprising:

 accepting a power signal from a power source; and

 converting the power signal into the magnetic source loop driving signal.
- 29. The method of claim 28 wherein converting the power signal comprises generating an oscillating signal from the power signal using a pulse width modulation circuit.
- 30. The method of claim 28 wherein accepting a power signal from a power source comprises accepting a power signal from a computer bus.
